STILL OS DIGITAL HOLDINGS LLC

Agent Economy Intel

The neutral, recomputable census of the real agent economy -- the operators every payment rail (x402, AP2, Visa TAP, Mastercard Agent Pay, Skyfire) is competing to capture.

6,723 real operators scored, synthetic fleets excluded
277 hosts advertising x402 payment | 20 probe PAYABLE | 5 published weights

What it is

Method -- every column is a measured property with a stated formula: reach, payment-readiness, surface stability, maturity, self-identification. The composite is a documented linear combination, not a black box.

Coverage -- public, anonymous-enumerable endpoints only (~55% of remote servers). Payment-readiness is x402-observable; AP2 / Visa / Mastercard / Skyfire coverage is reported as "unknown," never scored as absent.

Payability probe -- a structurally valid envelope carrying a deliberately invalid signature is sent weekly to every advertised x402 host. It records only whether the host parsed the dialect -- no wallet, no valid signature, no funds move.

Recomputable -- the board digest seals to the live notary chain. A stranger re-runs the engine against the same named state inputs and gets the same board, byte-identical.

Sample -- top of the board, captured 2026-11-18

#	operator (host)	score	x402?	probed	tools
1	www.stratalize.com	0.7348	yes	PAYABLE	201
2	47620.xyz	0.6954	yes	.	52
4	sqlguard.io	0.6948	yes	ungated	24
6	api.delx.ai	0.6902	yes	.	1068
14	fiatdock.com	0.6783	yes	PAYABLE	49

Pricing

Report -- $500 once

The full named-operator census as of a dated snapshot: every rated host, score, reach, payment-readiness, surface stability.

Feed -- $1,500 / month

Every new interval as captured -- arrivals, departures, score movement, the dated x402 payability probe. Cancel anytime.

Verify the exact sealed board this sample is drawn from:
